

#### The OpenOffice.org Specification Process Demistyfied

Christian Jansen, Jörg Sievers

Sun Microsystems

#### Agenda

- Why do we need specifications?
- Writing a specification
- A specification template Why?
- Q&A

# Why do we Need Specifications?

How Case	_				t
Size Width Communic Height (at least)	2,00cm () <b>10</b> 0,50cm ()	hor Difo alge To alge To ara ann As character	da	fte	er
Position Horizontal			<b>ge</b> Paragraph area		
Mirror on even pa	▶ by	-0,10cm 📚	<u>H</u> elp	<u>R</u> eset	Negative values can be entered here

### ... Way too many But...

### At least 12 test case representatives are needed for methodical testing

#### **Examplary Test Case Design**

Parameter*	Anchor	Vertical	Ву	То
Valid Classes	To paragraph To character	From Top	-2.0024.70	Margin; Paragraph Text; Area; Page Text Area
Invalid Classes	To page; As character	Top; Bottom; Center	min_val2,00-€; 24,70+€max_val	Entire page

\*Preconditions: Size of frame = 5x5 cm; cm as metric; page size=A4; orientation=portrait

- To reduce the count of test cases some black-box methods (here: equivalence class partitioning with boundary value analysis) are being used.
  - > Find for each equivalence class a representative test case.
  - > Combine all valid classes with one invalid class.

#### **Test Case Representatives**

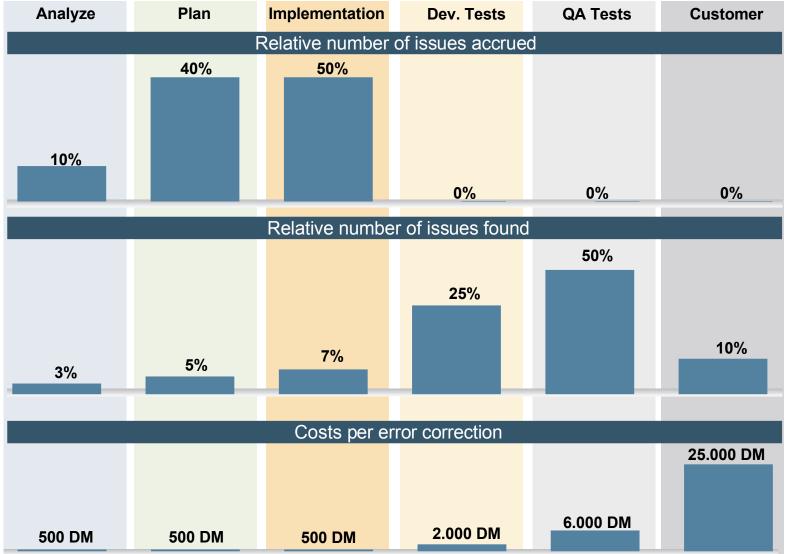

#	Anchor	Vertical	By	То	Result
1	To paragraph	From Top	-2.0	Margin	-2.00
2	To character	From Top	-1.43	Paragraph Text	-1.43
3	To character	From Top	-0.53	Area	-0.53
4	To paragraph	From Top	-0.01	Page Text Area	-0.01
5	To page	From Top	-2.00	Margin	To=0; by=locked
6	As character	From Top	-2.00	Paragraph Text	
7	To paragraph	Тор	-1.01	Area	
8	To paragraph	Bottom	-0.90	Page Text Area	
9	To character	Center	-0.01	Margin	
10	To paragraph	Тор	-2.01	Margin	
11	To paragraph	Тор	24.71	Margin	
12	To paragraph	From Top	-2.0	Entire page	

## More Impacts...

#### **Errors & Costs**

Ebert C., Dumke R (Hrsg.), Software-Metriken in der Praxis, Springer, Berlin/Heidelberg, 1996

#### Errors & Efforts on OOo

- QA evaluates issue
- Program Management sets target

#### Developer

- > Evaluates issue
- > Sets up workspace
- > Fixes issue
- > Builds workspaces
- > Evaluates fix

- QA evaluates fix in installation set
- Release Engineering
   integrates workspace
- QA
  - > Evaluates fix on master workspace
  - > Closes issue
- Customer installs fixed version

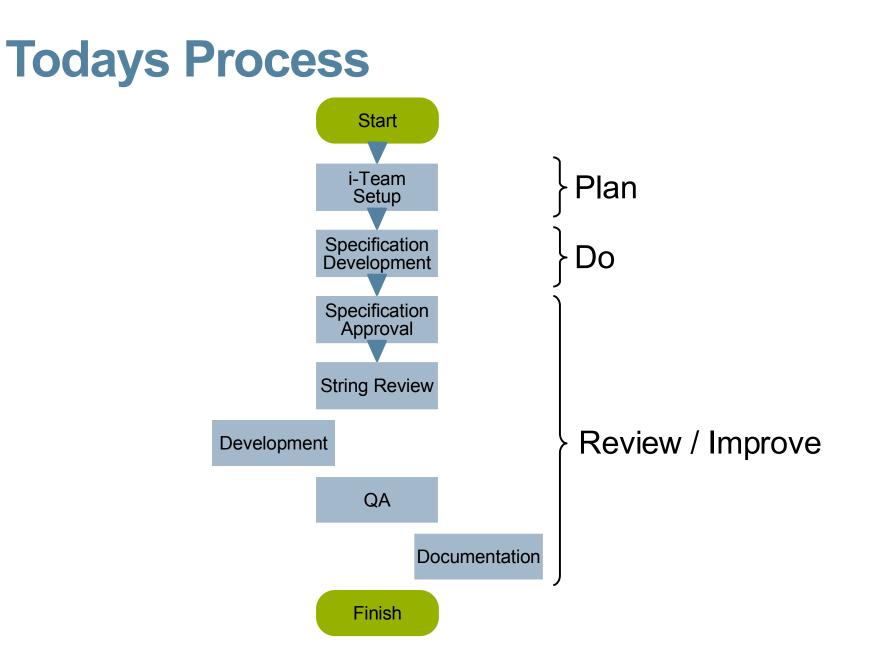

#### Conclusion

- Specifiying saves your time
- You increase the product quality
- You save others' time
- You can increase test coverage systematically if needed

# Writing a Specification

#### **Tomorrows Process**

## No Waterfall Model

#### How to Write a Specification?

- These pre-requisites are needed
  - > A requirement (customer need)....
  - > ... and an i-Team
- Development starts with a kickoff chat (IRC #openoffice, GAIM, ...)

#### Kicking off a New Feature...

- Develop a common sense of the goal
  - Introduce the feature
- Nail down the priorities
  - > Prioritize the sub-feature

#### Kicking off a New Feature...

- Nail down the responsibilities
  - > State clearly who is responsible for what
  - > Let the i-Team know who delivers what

#### Always keep the customer in mind

> Wether an internal stakeholder or external client, the customers satisfaction must be top priority

#### The Dont's in a Kickoff

- Don't:
  - > Design the feature:

This chat is for planning only. If there's design to be done, schedule another chat for that.

> Try to solve technical problems Don't get bogged down in details at this first chat.

#### > No Agenda

As this is a planning chat, this chat needs to be prepared. Long, unproductive chats exhaust people.

#### Plan

- I-Team Kickoff
- Detailed feature / sub-feature planning
- First design sessions

#### Do

- Create prototypes
- Write specification

#### Review

- i-Team reviews specification
- Based on three essential rules
  - > R1: Complete
  - > R2: Clear
  - > R3: Simple

#### **Specification Rules**

- R1: Complete
  - First and foremost a specification has to be complete. That means all relevant aspects of a feature have to be captured.
- R2: Clear

Each statement has to be unambiguously clear to Development, QA, User Experience, Documentation.

 R3: Simple Each statement shall be as short and as simple as possible.

#### Improve

- Reduction of defects in specification.
- Reduction of defects in implementation.

#### Finish

#### Specification and implementation must be identical

Implementation

Specification

## A Specification Template - Why?

### **A Specification Template - Why?**

- It simplifies writing specifications,
- It centralizes all information
- It gives you clear guidance on:
   "What" belongs to a specification,
   "How" to write a specification, and...
- ...It automates common tasks like specifying user interfaces

#### **A Specification Template -Why?**

## ...and thus it saves you and others time...

### Issues of the Old Spec. Template

- Separation between specification template and specification guide
- No links to required companion documents
- Unnecessary sections
  - Process related aspects (e.g. i-Team approvals)
  - > A motivation section, an user scenarios section, etc.
- Missing rules on how to write and read a specification
- Lack of examples

#### **The New Specification Template**
